The Client

Chaiology are a brand new concept restaurant based in Birmingham who pre Covid-19 were preparing to open up to the public and with current guidelines this was obviously postponed.

The Challenge

Chaiology have decided to continue work to open the restaurant, when guidelines allow, and they wanted a solution what would protect staff and customers alike from coronavirus and to make their business Covid-19 future-proof.

The Solution

We figured out what was required for the client's new venture to enable them to begin to trade in a safe environment and steered them in the right direction in line with their business needs with the installation of a temperate screening camera system.

The Feedback

"I quickly realised what the solution David from Affinity was suggesting and what they were doing with this innovative technology.

Once installed I could not have been more pleased with the service and after aftercare. Engineers arrived early, very professional, polite and tidy and extremely knowledgeable. I would just like to say a big thank you to David from Affinity for the great help in recommending me a temperature screening camera for my new restaurant.

I highly recommend, David, Affinity and the temperature screening technology. I believe this innovative technology should be deployed in every business to help safeguard staff and customers in this current climate and Affinity is the company to help achieve this.

I have made it a recommendation to have these installed in all future ventures and in my other business interest in my pharmacies."
